LESSON 04 OF 06

Detecting Fake Websites

How to recognise suspicious websites

- Inspect the complete domain name.
- Look for spelling mistakes and unusual characters.
- Be cautious with shortened URLs.
- Check whether the website address matches the organisation.
- Do not rely on website appearance alone.
- Navigate to important services using a known official address.

Understanding HTTPS

HTTPS encrypts communication between your browser and a website. However, HTTPS does not guarantee that the website itself is trustworthy.

Example

A website may imitate a legitimate company but use a different domain name. Always inspect the actual hostname before trusting the destination.

> **Key lesson:** Inspect the domain, not just the company logo or padlock icon.
