LESSON 06 OF 06

Incident Response

What should you do if you encounter phishing?

1. Do not click suspicious links or open unexpected attachments.
2. Report the message through your organisation's approved process.
3. Preserve relevant evidence when instructed by your security team.
4. Do not forward suspicious messages to other employees.
5. Follow your organisation's incident response procedures.

What if you already clicked a phishing link?

1. Stop interacting with the suspicious website.
2. Notify your IT or security team immediately.
3. If you entered credentials, change the affected password from a trusted device.

CYBERSAFE

Home Lessons Practice Quiz

3. If you entered credentials, change the affected password from a trusted device.
4. Review account activity and revoke suspicious sessions where appropriate.
5. Contact your bank immediately if financial information was exposed.
6. Follow the security team's instructions.

Why reporting matters

Early reporting allows security teams to investigate, contain potential threats and protect other users.

> **Key lesson:** Reporting a mistake quickly is much better than hiding it.
