LESSON 05 OF 06

Protection Strategies

How to protect yourself

- Use strong and unique passwords.
- Enable multi-factor authentication.
- Use a reputable password manager.
- Keep your operating system and applications updated.
- Avoid opening unexpected attachments.
- Verify unusual payment requests independently.
- Report suspicious messages to your security team.

Understanding multi-factor authentication

Multi-factor authentication adds another verification step beyond a password. Depending on the method, this may involve an authenticator application, security key or other authentication factor.

Organisational protection

Organisations should provide regular security awareness training, implement email security controls and establish clear procedures for reporting suspicious activity.

Key lesson: Good security habits make it harder for attackers to succeed.
